RE: Terminal Clean

This document is to certify that a terminal clean was done on 8/19/20 at the following locations:

7050 Lake Country Dr. / Terminal Clean

- Entire Campus

Terminal disinfection has the objective of preparing complete rooms or areas for subsequent patients or residents for them to be treated or cared for without the risk of acquiring an infection.

Terminal cleaning is a cleaning method used in healthcare environments to control the spread of infections. ... **Terminal cleaning** methods vary, but usually include removing all detachable objects in the room, **cleaning** lighting and air duct surfaces in the ceiling, and **cleaning** everything downward to the floor. NABC Disinfectant was used with a 99.99% percent kill factor and a set time of 5 minutes.

During this time of uncertainty with the health and well being of everyone at risk we at Alpine Building Maintenance are here to help in anyway we can. Anytime you feel the need for a terminal clean or any other form of cleaning do not hesitate to call us.

If you need any further information please let me know.

Blessings,

Perry H. Hoover
President
